The use of Unmanned Aerial Vehicles (UAV) has improved operational efficiency and productivity. UAVs are used in port for filming and inspecting a vessel in a safe manner. The adoption of UAVs has been advantageous due to the following aspects:

1. **Reduced Administrative Overhead:** UAVs automate the process of capturing video and images, reducing the need for manual reporting and allowing for quicker decision-making.
2. **Increased Safety:** UAVs can fly in areas that are difficult or dangerous for humans, reducing the risk of accidents and injuries.
3. **Cost-Effective:** UAVs offer a cost-effective alternative to traditional methods for port inspections and monitoring.
4. **Remote Operation:** UAVs can be operated remotely, providing flexibility and efficiency.
5. **Continuous Monitoring:** UAVs can be used for continuous monitoring of port operations, ensuring safety and compliance.

With the increasing use of technology in port operations, the integration of UAVs and other advanced technologies is expected to further enhance efficiency and safety.
